

Sponsorship and Exhibition Opportunities

THE CONFERENCE

The challenge of creating a more secure, sustainable and affordable global energy system is one of the most important issues facing policy makers, researchers and energy industry figures today. With ambitious 2020 targets laid down by the UK government, it is vital to consider how divergent social, environmental and economic objectives can be balanced across technologies to deliver a coherent energy system that will be effective in the long-term. This conference will explore the most suitable and efficient ways to build a better energy system. It will examine new thinking about the structures, processes and policies that are needed to ensure technology integration and drive a step change in investment, whilst considering the overall impact of these initiatives at the system level. Innovative ideas and solutions will be discussed in order to analyse and assess possible options for implementation. Outcomes will be published to provide recommendations for policy and decision makers.

TOPICS INCLUDE

Energy policy, Energy economics, Energy security, Energy systems, Disruptive energy technologies, Integration, The grid, Case studies, Infrastructure, Urban transition, Public engagement, Innovation, Life cycle assessment (LCA), Climate change
